Name: Adnaan Syed

Lesson 5: If-elif-else Statements

1. Make a list of 5 or more usernames, including an admin account. Imagine you are writing code that will welcome people to your application on login. Loop through the list and print your greeting.
   a. If the admin account logs in, give them a special greeting. They're the admin, after all!
   b. Other users can get the generic greeting

```python
accounts = ["aaa@aol.com", "bbb@aol.com", "ccc@aol.com", "ddd@aol.com",
"admin@aol.com", "eee@aol.com"]

for acc in accounts:

 if(acc=="admin@aol.com"):

   print("So glad to have you back on oh special one!")

 else:

   print("Hi")
```

2. Store numbers 1-10 in a list
   a. Loop through the list
   b. Use an if-elif-else chain inside your loop to print the ordinal ending for each number –
      for example – 1st, 2nd, 3rd ... etc.

```python
list = []

for i in range(1,11):

 list.append(i)

for el in list:

 if(el==1):

    print(str(el)+"st")

 elif(el==2):

    print(str(el)+"nd")

 elif(el==3):

    print(str(el)+"rd")

 else:

    print(str(el)+"th")
```
